

Upload videos to play in a Live event

To share videos during a Live event, upload them to your event content. Then in the Live Studio, choose how to present the videos: either launch a video as an overlay or inline (in the video player).

Tip: To avoid distortion, if you plan to share a video inline, upload a video with the same aspect ratio as the video player (16:9 for video bridge broadcasts; 4:3 or 16:9 for webcam and encoder).

You can include up to 10 videos. Each video can be up to 10 GB, must be at least 15 seconds long, and include an audio track. Supported file types include: 3GP, ASF, MOV, MKV, MPEG, MPG, MP4, F4V, WEBM, and WMV.

For more information about video requirements, see [Overlay Video Specs and Requirements](#).

To upload a video to the event:

1. Sign in to the Webcast Admin portal and edit the event.
2. On the left panel, click the **Event Content** tab.
3. Under Media Clips, click **Upload a Clip**.

[Media Clips section with the Upload a Clip button](#)

4. In the Upload a New Clip window, click **Choose File** and browse to select the video.
5. The video title is automatically generated based on the file name. If you'd like, change the clip title and click **Submit**.

6. After the video has finished uploading, an Upload Successful message is displayed to let you know that it is being transcoded by the system. Click **Ok**.

The video is displayed in the Overlay Videos section with a processing status. Once it has finished processing, you can optionally change the video title.
